

**INSTRUCTION**  
**for Users of the Open Data Portal of the Republic of Uzbekistan**  
**for the Author Role**

## Introduction

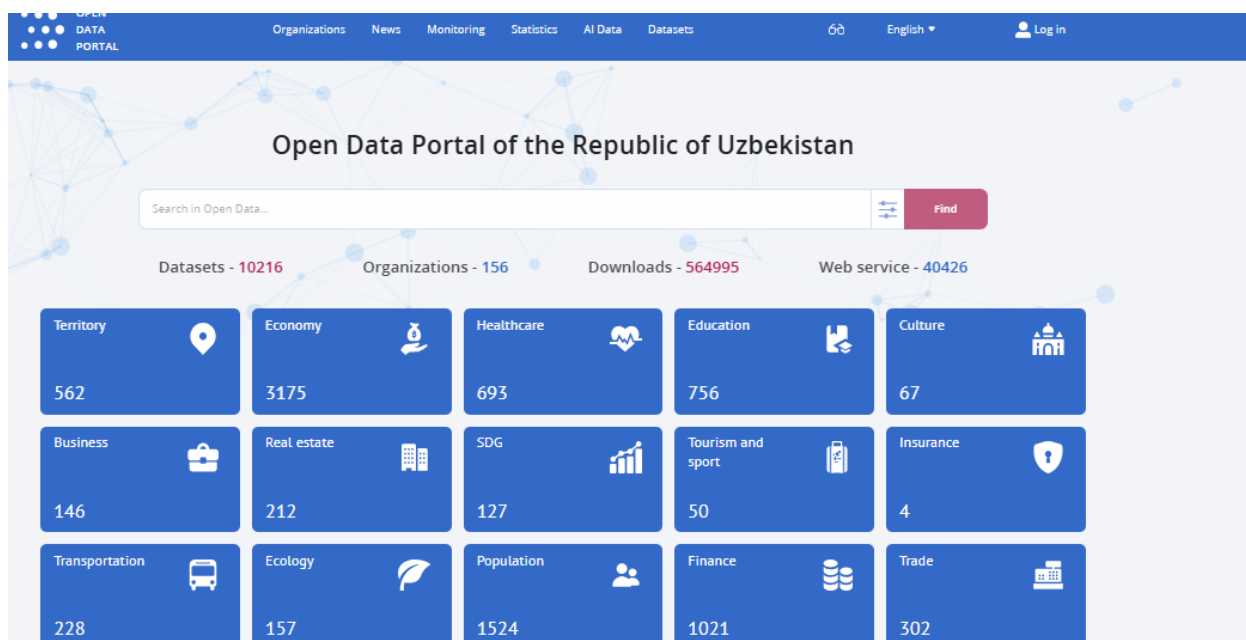

The Author role is designed for creating datasets based on the passports created by the operator.

To access the personal account, the user must register in the unified identification system (id.egov.uz) and the unified authentication system (auth.egov.uz) of the Electronic Government.

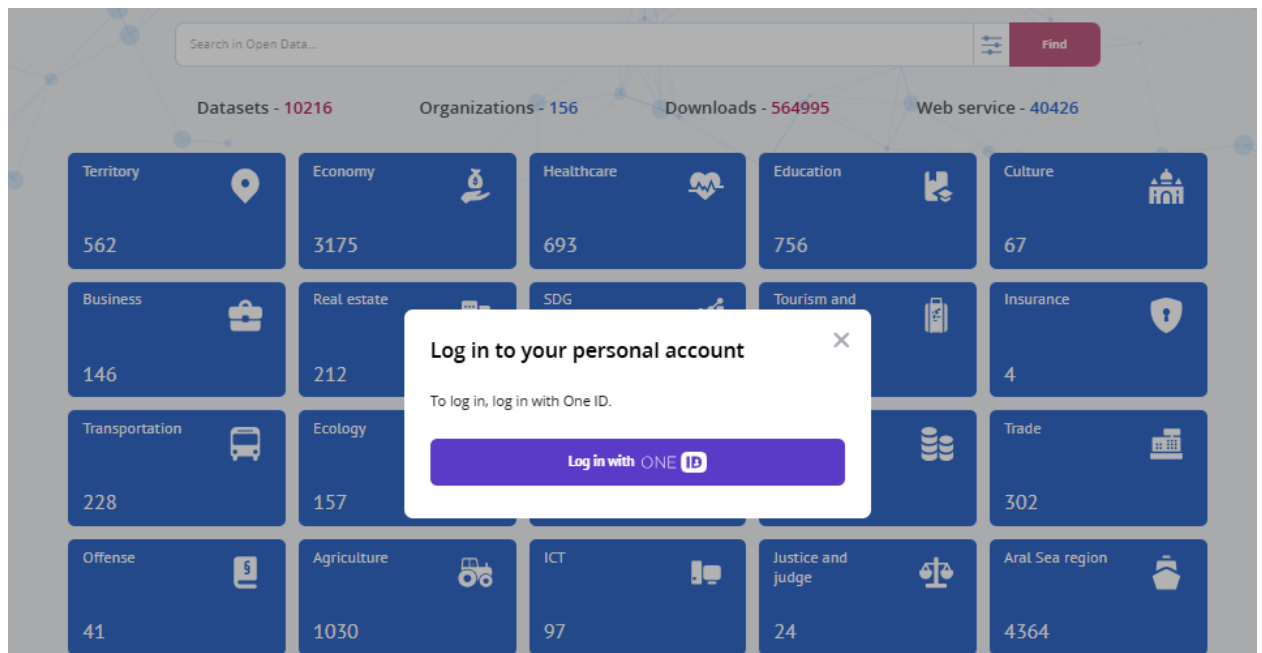

To authenticate in the system auth.egov.uz, the user must contact the administrator of their organization, who is authorized to grant access to the Open Data Portal under the Author role.

## Login to the System

To log in to the system, the user must enter their personal account by clicking the **"Log In"** button located in the top right corner of the Portal's main page.

After clicking the "Log In" button, the system will require authentication in the Unified Identification System (OneID – id.egov.uz).

When logging into the Unified Identification System, the system will require you to enter your username and password.

Redirect to the system

[Login](#) [Mobile-ID](#) [E-sign](#) [QR-code](#)

**Login**

**Password**

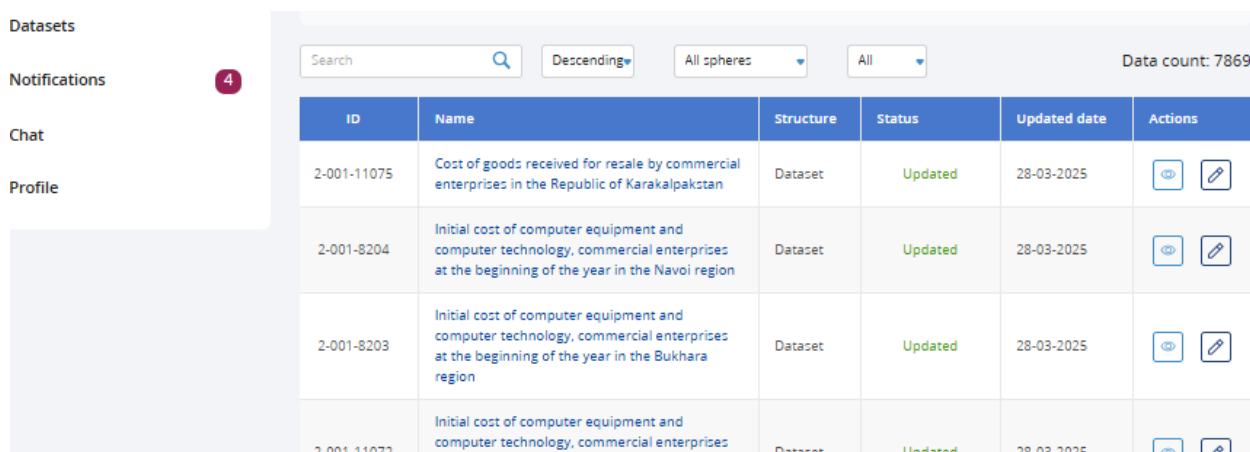

[Forgot your username or password?](#)

[Sign In](#)

[No account in the system? Sign up now](#)

After logging in, the system will redirect to the Open Data Portal to the author's personal account, where the passport data of the open data sets created earlier by the operator will be displayed. These sets will need to be supplemented with the necessary information. In the author's personal account, a menu will be displayed consisting of two sections:

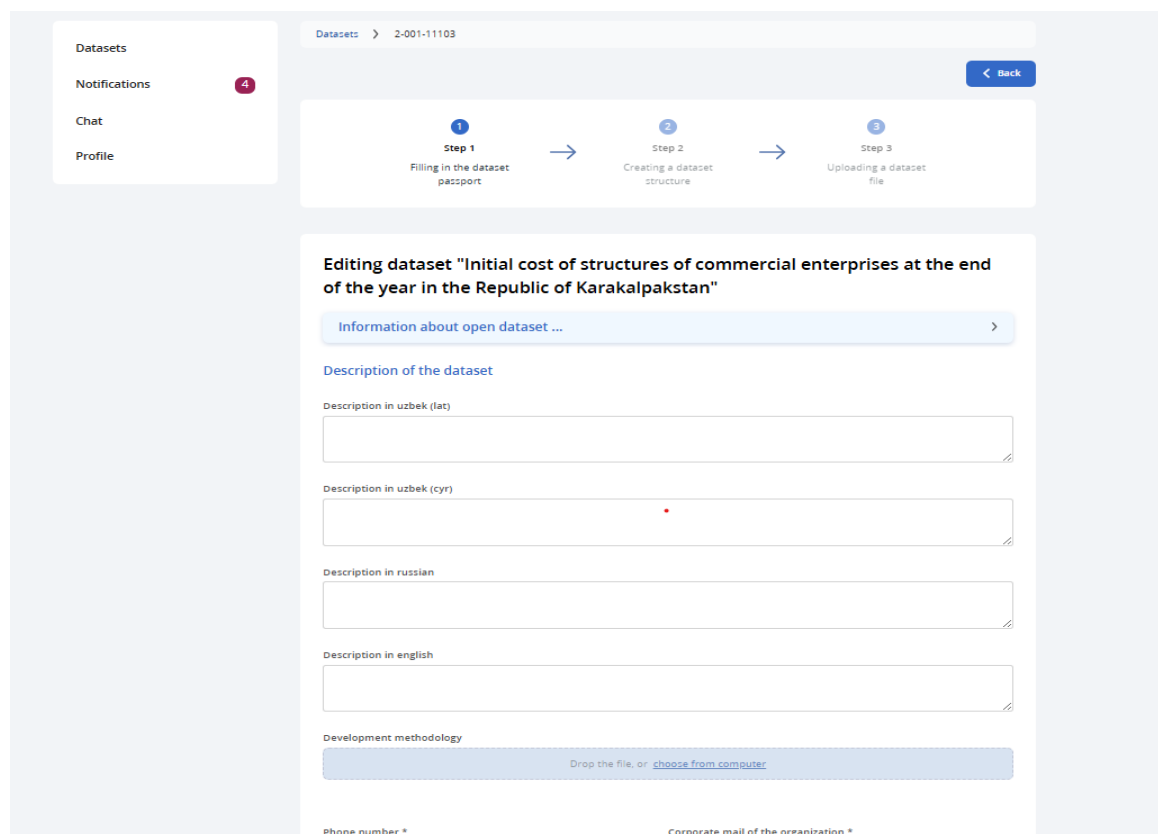

- **Data Sets** – data that needs to be completed;
- **Notifications** – messages received from the operator when deficiencies (with reasons for rejection) are found in the data sets for further refinement by the author.

ID	Name	Structure	Status	Updated date	Actions
2-001-11075	Cost of goods received for resale by commercial enterprises in the Republic of Karakalpakstan	Dataset	Updated	28-03-2025	
2-001-8204	Initial cost of computer equipment and computer technology, commercial enterprises at the beginning of the year in the Navoi region	Dataset	Updated	28-03-2025	
2-001-8203	Initial cost of computer equipment and computer technology, commercial enterprises at the beginning of the year in the Bukhara region	Dataset	Updated	28-03-2025	
2-001-11072	Initial cost of computer equipment and computer technology, commercial enterprises	Dataset	Updated	28-03-2025	

To edit the data sets, you can navigate by clicking on the data set name or the edit button. 

After clicking the edit button, the author will see a window consisting of three steps for filling in the data. 

**Editing dataset "Initial cost of structures of commercial enterprises at the end of the year in the Republic of Karakalpakstan"**

Information about open dataset ...

**Description of the dataset**

Description in uzbek (lat)

Description in uzbek (cyr)

Description in english

**Development methodology**

Drop the file, or [choose from computer](#)

Phone number \* Corporate mail of the organization \*

**STEP ONE** is intended for filling in the general information of the open data set. This section consists of the following items:

### **1. Information about the open data set...**

This section is intended for viewing general information about the current data set:

- Organizational structure
- Organization providing the open data
- Responsible person
- Open data set ID
- Title in Uzbek (Latin)
- Title in Uzbek (Cyrillic)
- Title in Russian
- Title in English
- Sector
- Is it a priority?
- Update frequency

At the same time, the author will have the opportunity to view general information about the data sets.

### **2. Publication of Open Data Sets**

This section is intended for the author to fill in the following information:

#### **2.1. Methodology of Development**

In this section, a file is attached that reflects the methodology of data development, which includes the methods and algorithms for calculating and forming the data, as well as the sequence of actions that led to the final result.

Filling in this field is optional.

Development methodology

Drop the file, or [choose from computer](#)

#### **2.2. Organization's Phone Number and Corporate Email**

These fields are used to enter the organization's work phone number and corporate email address, which will be displayed in the data set passport.

Filling in this field is mandatory.

Phone number \*

+(998) 71 203-80-29

Corporate mail of the organization \*

opendata@stat.uz

#### **2.3. Type of Data Set**

This section requires selecting one of the two types of data:

- **"Editable"** – implies data updates without changes to the structure (columns) of the data. In this case, the table rows may change (be added or removed).
- **"Fillable"** – implies changes to the structure by adding additional columns.

#### Type of data set

Editable

Fillable

### 2.4. Legal Basis for Publication (Regulatory Act)

This field is used to enter the number, date, and title of the regulatory legal act on the basis of which the data set is generated.

Basis for publication (RLA)

RLA

**Filling in this field is optional.**

### 2.5. Keywords Corresponding to the Content of the Open Data Set (separated by commas)

This field is used to enter words (tags) related to the data set.

Tags are keywords that help quickly find the necessary information — they are a brief but meaningful representation of the content or purpose of the text or other information in the file. These keywords will help users quickly locate the data among other data sets.

**Filling in this field is mandatory.**

Keywords corresponding to the content of the open data set (separated by commas) \*

Initial,structure,coast

### 2.6. Link to the Open Data Set on Other Web Resources

This section is used to provide a link from an internet resource (website, portal, etc.) where information related to this data set is also published.

Link to an open dataset on other web resources

uz.uz

After completing the data set, it is necessary to save the entered information using the **"Save"** button.

Once the data is saved, the system will proceed to the second step.

In **STEP TWO**, the author creates the data structure, which is the main stage in the data formation process.

Data types are intended for the following purposes:

**Date** – the field is intended for entering data in date format (e.g., 12.03.2021).

**Text** – the field is intended for entering text in 4 languages (Uzbek-Latin, Uzbek-Cyrillic, Russian, English). When this type is selected, the system will automatically create 4 columns for data entry in 4 languages during Step 3. This field will accept data in letter, numeric, and symbolic values.

**String** – the field is intended for entering data in one language. When this type is selected, the data template will form one column. This field will accept data in letter, numeric, and symbolic values.

**Number** – the field is intended for entering numerical data only.

**Directory** – the field is intended for entering data of directories and classifiers.

**Location** – the field is intended for entering data to display as a geolocation point on an electronic map. The input format is:

**LATITUDE LONGITUDE**

41.21542 64.65432

**Polygon** – the field is intended for entering sequential data to designate an area or trajectory of an address on an electronic map. Data is entered in the following format, in sequence, in a single cell:

[Latitude1, Longitude1], [Latitude2, Longitude2], [Latitude3, Longitude3]

For example:

[41.21542, 64.65432], [51.21542, 32.65432], [61.21542, 65.65432]

In this example, three points are marked on the electronic map.

After the structure is formed, the entered data is saved, and the system automatically moves to the third step.

## Dataset structure

+ Add field

Name	Is Visible	Uzb Text	Rus Text	Eng Text	UzbCry Text	Edit
Hudud	<input checked="" type="checkbox"/>	Hudud	Регион	Region	Худуд	 
Olchovbirligi	<input checked="" type="checkbox"/>	O`lchov birligi	Ед.изм	Unit	Ўлчов бирлиги	 
2010Y	<input checked="" type="checkbox"/>	2010Y	2010Y	2010Y	2010Y	 
2011Y	<input checked="" type="checkbox"/>	2011Y	2011Y	2011Y	2011Y	 
2012Y	<input checked="" type="checkbox"/>	2012Y	2012Y	2012Y	2012Y	 

**At the third step**, in the first section, the system generates a template for data entry based on the structure created in the second step.

### Loading a dataset

1. Loading the dataset structure

Download the dataset structure file

 Download file

2. Upload a dataset of open data

Fill in the dataset structure table and upload it to the field below

Drop the file, or [choose from computer](#)

Back 

Save

[API functionality for integration](#)

Get API

To download the template, you need to click on the "**Download File**" button.

After that, the template will be exported in xls format.

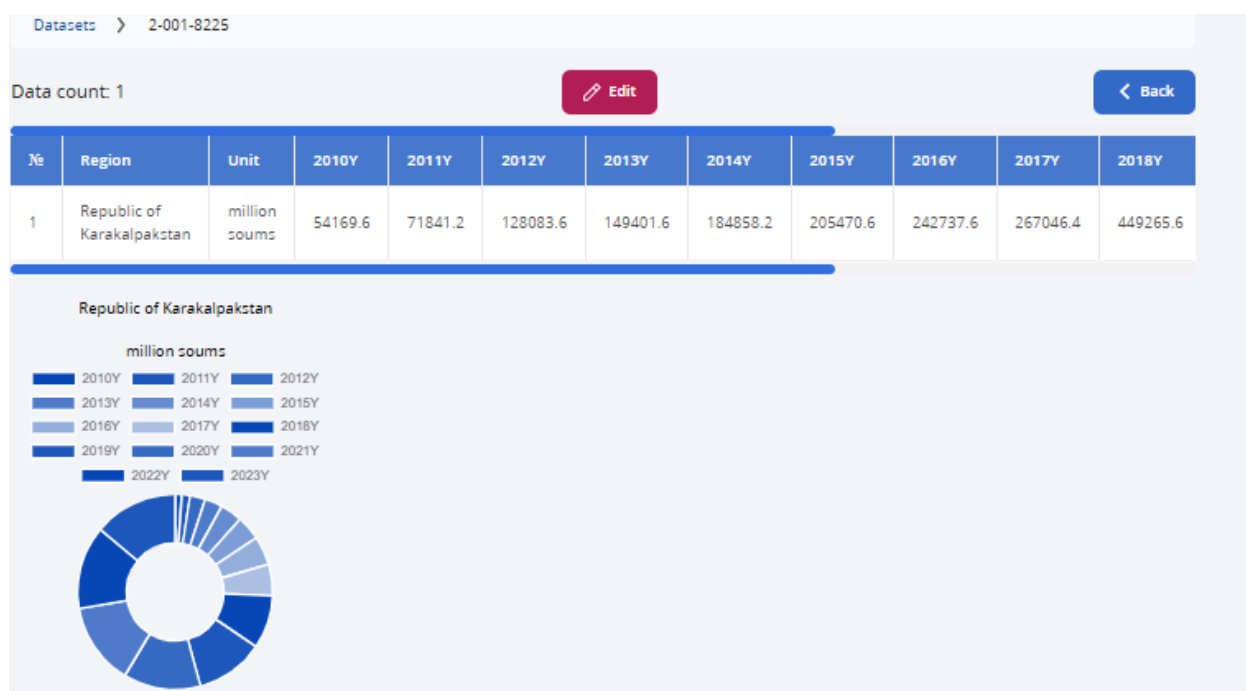

The author fills out this template (without any changes to the column names) and uploads the completed template in section 2 "**Upload Open Data Set**". The upload can be done either by dragging the file into the designated area or by selecting the file from the local disk of the computer.

The entered data will automatically appear on the main page of the author's personal account.

ID	Name	Structure	Status	Updated date	Actions
2-001-8225	Initial cost of vehicles, commercial enterprises at the beginning of the year in the Republic of Karakalpakstan	Dataset	Updated	14-04-2025	 

To view the entered data, you need to click on the view button. 

After that, the data uploaded by the operator will be displayed.

In addition, to enable automatic data upload from information systems and resources of government agencies, the option to use an API (API functionality for integration) has been created, which is also automatically generated at Step 3.

API functionality for integration

Get API

When clicking the "**Get API**" button, the author will see the data for integration:

Name	Value	Description
Method	POST	Http method
URL	https://data.egov.uz/apiData/MainData/ExternalApi	URL of API

    }
  ],
  "id": "67c03aa6417e18628873acd4",
  "token": null
}
```

With the specified parameters, it is possible to organize real-time data transmission to the open data portal.

The activity indicator on the main page of the author's personal account will allow the data set to be hidden in case any deficiencies or errors are found in the data set. To do this, the author only needs to deactivate the indicator in the **"Active"** column.
